

ABSTRACT

[0032] The hanging tool support assembly of this invention provides a portable, adjustable support to hold and/or position a tool, such as a flashlight. The hanging tool support assembly hangs or is otherwise suspended from a support line proximate to a work area. According to embodiments of this invention, the hanging tool support assembly includes a pair of inverted, J-shaped hangers, a downwardly extending arm, a movable support piece connecting the downwardly extending arm to a tool support base, the tool support base, and attachment means for supporting and/or holding a tool to the tool support base. In various embodiments of this invention, the hangers may further include additional safety and/or positioning components.
